

SELF-PROPELLED TRANSPORTERS

**DESIGNED WITH SPEED AND PRECISION  
TO IMPROVE EFFICIENCY AT YOUR YARD.**

TM 40 - WI, USA

Marine Travelift self-propelled transporters allow you to fit boats tighter together and utilize every inch of space in your marina or shoreline service yard.

### **Working in tandem lifts productivity.**

Our transporters speed and customizable design make them ideally suited to work together with our mobile boat hoists. Using the two machines in tandem allows you to move a greater number of boats in the same amount of time. While the transporter is maneuvering boats into storage or retrieving them for launch, the boat hoist is free to continue pulling and launching boats.

# MAXIMIZING SPACE, ADDING VERSATILITY

Marine Travelift self-propelled transporters are available in lifting capacities ranging from 20 metric tons to 160 metric tons and greater. Our open-end design allows for precise, quick and easy positioning under vessels, without having to pre-lift them into position. To maximize versatility of these units, they are equipped with radio remote control and crab steering as standard. This offers the operator better visibility of the vessel and the ability to maneuver diagonally into position in the most confined spaces.

TM 20

## FLEXIBLE DESIGN

Whether you are moving sailboats, powerboats or catamarans, our self-propelled transporters can be configured for the job. The versatile design makes adding options easy in order to suit specific types of vessels or multiple applications.

## POPULAR OPTIONS
